

Write a query that Inserts a new actor into the database. Once you have completed the insert, write a query to view all information for that specific actor.

```

INSERT INTO sakila.actor (first_name, last_name, last_update) VALUES ("Emma", "Stone")
select * FROM sakila.actor WHERE first_name = "Emma" AND last_name = "Stone"

```

Write a query to Update the actor that you just inserted. Give your new actor a first_name of Emmy and a last_name of Rock. When you have completed that update, run another query to see your updated employee.

```
UPDATE sakila.actor SET first_name = "Emmy", last_name = "Rock" WHERE actor_id = 203  
SELECT * FROM sakila.actor WHERE actor_id = 203
```

Write a query that finds all staff that do not have a value specified for password.

```
SELECT * FROM sakila.staff WHERE password IS NULL
```

Write a query that finds all staff's information that has a value for first_name and store_id.

```
SELECT * FROM sakila.staff WHERE first_name IS NOT NULL AND store_id IS NOT NULL
```

Write a query that updates all people with a Null value in the address2 column. If the district is Alberta, put address2 as Canada, and if the district is QLD, put Australia.

```
UPDATE sakila.address  
SET address2 = "Canada"  
WHERE district = "Alberta";
```

```
UPDATE sakila.address  
SET address2 = "Australia"  
WHERE district = "QLD";
```
